Dynamic Power Cloud Manager

The automation solution for your IBM Power environment

IBM   VINCI ENERGIES

DPCM

AXIANS DYNAMIC POWER CLOUD MANAGER

Axians has developed the Dynamic Power Cloud Manager to automate complex, security related and critical management tasks for virtual servers on IBM Power systems under AIX, IBM i, Linux, and SAP HANA: comprehensively, clearly, and conveniently.

Using DPCM will reduce operating costs immediately, while increasing availability and security.

For over ten years, we have been developing DPCM in close collaboration with our partner IBM. The Dynamic Power Cloud Manager is the industry's leading automation solution and is used by numerous clients in a variety of fields.

The latest version DPCM X once again offers an expanded range of features.

FEATURES

BENEFITS

Save Money

- Optimize operating costs through automation and standardization.
- Reduce hardware costs through optimal hardware use.
- Use resources and hardware efficiently.

Save time

- by means of automation
- by means of easy and fast operation via web frontend
- by eliminating the need for manual modification

Increase availability and scalability

- integrated features for optimizing and securing high availability
- Disaster Recovery – safe, secure, and fast
- DPCM-operation as independent instance
- non-invasive for PowerVC, HMC, or VIOS
- integrated monitoring for comprehensive information

Standardization

- consistent rollouts of virtual servers
- identical images and scripts for all your virtual servers
- standardized, reliable, and automated disaster recovery process

Asset Management

- complete inventory for your hard- and software systems

Integrated role and user models

- user model with hierarchy levels
- features such as absence and stand-by modes

Provisioning & Configuration Management

- automated real-time provisioning of your systems
- comfortable configuration management
- automated deployment and re-deployment of your systems

Monitoring

- extensive monitoring and load monitoring in real-time as well as for user-defined retrospective time spans

Premium Support
Software Assurance

- Our integrated premium support is covered by an individual support team, which has a fast response time, providing answers and solutions for your questions regarding DPCM.
- We support you in planning and implementing a DPCM-based system environment following the principle of "Any Service on Any System".
- We also support you in optimizing your DPCM infrastructure and configuring HMC, VIO, NIM, etc.
- During the initial project phase, we offer extensive support during DCPM installation as well as during the complete introductory phase.
- After successful implementation, we help you to get the most out of the software.
- We provide professional support when it comes to creating client-specific DPCM images.
- We provide professional support with on call service and fast response time.

Take control of highly virtualized IBM Power environments

> In looking for a solution to manage its highly complex IT ecosystem, HUK-COBURG was thoroughly convinced by Axians' DPCM. Thanks to its standardization and automation features, Axians' DPCM proved to be the ideal tool for simplifying HUK-COBURG's IT administration.

Disaster recovery

thanks to integrated Recreate feature

Management

made easy thanks to efficient administration

Quick provisioning

of IT resources

Simplify your Power-Admin

BALLUFF

> The database response times at Balluff GmbH were significantly accelerated and admin simplified substantially thanks to DPCM. What was most persuasive: Changing requirements could now be responded to immediately without any assistance.

Administration of IBM Power environment

without external support

Creation and administration

of LPAR profiles made easy

**Fast disaster recovery**

for dealing with worst-case scenarios

AXIANS POWER EXPERIENCE CENTER

Take DPCM for a free and non-binding test-drive, in the new Axians Power Experience Center.

We have set up a dedicated IBM POWER environment for you to try out the features and possibilities of DPCM, such as virtual server set-up, back-up and recovery features, extensive monitoring, and load optimization.

**Also visit the product page at DPCM.io and register for free.
And you are more than welcome to contact us directly.**
