

Dynamic Power Cloud Manager

Unleash the full potential of your IBM Power environment: The Dynamic Power Cloud Manager is the leading automation solution, making the operation of virtual servers significantly easier under AIX, IBM i, Linux and SAP HANA. While substantially boosting availability and saving resources. www.dpcm.io

NEW: The VIOS advisor for the automated polling and collection of key performance metrics of VIOS configurations recommended by IBM.

Optimize resources

Reduce operating & investment costs by automating, standardizing and optimizing the deployment of hardware.

Save time

Automate manual actions and leverage the intuitive web frontend for operation made quick and easy.

Boost availability

Ensure high availability thanks to integrated functions; perform disaster recovery quickly and securely.

Maintain the big picture

Generate environment-wide reports at the click of a button to keep an eye on storage, systems and virtual servers.

Maximize security

The Fix Level Recommendation Tool (FLRT) generates up-to-the-minute fix/patch reports so you always have the whole picture when it comes to patch gaps and addressing them.

Benefit from Premium Support

A dedicated support team responds promptly to requests and offers all-in-one worry-free support for all your DPCM needs.
